Summary

Backend Engineer with 2.5+ years building scalable distributed systems using Java, Spring Boot, RabbitMQ, Redis and cloud-native microservices. Experienced in designing event-driven architectures, optimizing high-throughput APIs, and delivering cloud-agnostic backend platforms across AWS, GCP and Azure.

Experience

[\[+More\]](#)

Unicus Consultech Inc.

Bengaluru, Karnataka(Hybrid)

Software Development Engineer II

Oct 2023 – Present

- Designed a **queue-based, event-driven architecture** using **RabbitMQ** to decouple 8+ microservices, eliminating synchronous coupling on the critical path & improving API p95 response time by 35%.
- Implemented **GCP, AWS, and Azure** adapters for the platform's storage and messaging abstractions — reduced new-cloud onboarding for a deployment from 2 weeks to 3 days, with no service-layer code changes.
- Built a resilient cloud-agnostic data ingestion framework **supporting asynchronous file processing, queue-based orchestration, DLQs, validation, and fault-tolerant** recovery across 10+ document templates.
- Introduced **Redis caching** to optimize high-traffic endpoints, reducing system load by 40% and cutting average response times by 60%.
- Tuned **MySQL** query performance via **index redesign** and read-replica routing for read-heavy endpoints, cutting p95 query latency by ~45%.
- Expanded automated unit testing using **JUnit 5** and **Mockito** for **30+ critical REST endpoints**, increasing release confidence and enabling faster production deployments.
- Rebuilt **Jenkins CI/CD** pipelines with build caching and parallel test execution, cutting build-and-deploy time from ~30 min to ~4 min and enabling daily releases.
- Architected a pluggable connector framework integrating **Oracle NetSuite, OneDrive, SEC.gov, and Zoho** with standardized authentication, pagination, retries, and data transformation, enabling rapid onboarding across 3 product lines.
- Contributed to establishing backend engineering standards under guidance, covering **structured logging, OpenTelemetry instrumentation, resilient exception handling, and production readiness** during code reviews, contributing to a **25% reduction** in production incidents over two quarters.

Tata Consultancy Services

Pune, Maharashtra

Project Intern

Feb 2023 – May 2023

- Drove proof-of-concept implementations of **Server-Driven UI** for a Connected Car Cockpit system, evaluating multiple Android UI rendering libraries to identify the best fit for dynamic in-vehicle interfaces.
- Worked on **AOSP** (Android Open Source Project) host-app integration, gaining hands-on exposure to in-vehicle Android architecture and dynamic UI delivery patterns.

Skills

Languages/Frameworks: Java 21, Spring Boot, Spring Security, Spring Data JPA, Hibernate, Python/Django.

Design & Architecture: Microservices, Event-Driven Architecture, Distributed Systems, REST API Design, Cloud-Agnostic Patterns.

Cloud & DevOps: GCP (Pub/Sub, Cloud Functions, Storage), AWS, Azure, Docker, Kubernetes, Jenkins CI/CD.

Database & Messaging: MySQL, MongoDB, Redis, RabbitMQ, Flyway.

Testing & Observability: JUnit 5, Mockito, OpenTelemetry, SigNoz, Postman.

Education

Medi-Caps University

Indore, Madhya Pradesh

Bachelor of Technology in Computer Science - GPA: 8.89

Aug 2019 - May 2023

Achievements

- Achieved **5-star** rating on [CodeChef](#) with a peak rating of 2048 and a global rank of 966 / 215K users.
- Google Hash Code — **Global Rank 1063** (Qualification Round 2022) and **Rank 1572** (Qualification Round 2021).
- Qualified for Round 1 of Facebook Hacker Cup 2021.
- Solved **800+** competitive programming problems and participated in 100+ rated contests across [CodeChef](#), [LeetCode](#), and Codeforces.

Certifications

- [Cisco Certified Networking Academy](#) | [Data Structures and Algorithms \(Coursera\)](#)
